Introduction

Ter Braak b.v. was founded in 1946 and almost from the very beginning is recognised as a world leading sales, development, design and manufacturing company of process machinery used for the mass preparation and processing of confectionery products. Modern machines and production lines from Ter Braak are operating world-wide with capacities ranging anywhere from 30 kg/hr to more than 5000 kg/hr, depending upon type of installation and product requirements. Ter Braak caters for any size company by supplying both individual machines and complete lines. The equipment is modular in construction and features central connections for services (steam, air, water, electricity) resulting in a shorter set-up time. In 1996 Ter Braak joined the Hosokawa Micron Group, which is a global operation comprised of a large number of companies spanning three different businesses: powder and particle processing; blown film processing and confectionery and bakery technology and systems.

Hosokawa Ter Braak’s Primary Products

- Pre-mix preparation equipment for weighing and mixing of raw materials used in a variety of confectionery products.
- Equipment for pre-heating, dissolving, cooking, mixing, cooling and depositing of sugar confectionery syrups and masses.
- The choice of equipment available from Hosokawa Ter Braak includes all types of batch and continuous production lines assembled from standard components. Hosokawa Ter Braak also offers specialty process equipment, built to meet specific production requirements as requested by the customer, thus providing custom built solutions for production methods.
- Modular design makes it possible that most stand-alone machines and cookers can be integrated into a complete automated production line at a later date as capacity requirements increase.
- The degree of automation and sophistication depends on the customers’ requirements and budgets, however, control systems are available for all types of PLC hardware and include a variety of software programs.
Hosokawa Ter Braak

has sold thousands of machines, ranging from the very simple to complete central computer controlled processing lines.

Specialists in custom-made systems
Why Hosokawa Ter Braak?

- Highly specialised equipment to meet the most demanding process requirements and conditions.

- Relatively small and therefore flexible team of specialists at Hosokawa Ter Braak will be dedicated to work closely with you to help find the most suitable solution for your production needs. This will often result in custom designed and manufactured equipment.

- Most extensive and proven technological experience and skills in the sugar confectionery field, world-wide.

- Optimum service and technical support before, during and especially after sales.

- Ongoing research and new product development work.

- Our prime aim is to solve the customer’s problems as quickly and efficiently as possible, using all resources and technical know-how available to us.

Test centre

As a service to our customers, Hosokawa Ter Braak offers the possibility of testing and developing all types of sugar confectionery products with and for our clients. To do this, a complete, well-equipped pilot plant facility is available on site at the Hosokawa Ter Braak factory, which includes the complete range of Hosokawa Ter Braak cooking systems and equipment in small-scale execution. The test centre serves our own R&D needs as well as those of our valued customers. Skilled, specialised technical staff are available at the test centre to assist our clients in achieving their goals; confidentiality is ensured at all times.
